

Vineyard Fresh

Allow your customers to experience the **FREEDOM** to open whatever they want, whenever they want.

Vineyard Fresh can help your business sell more higher-priced wines to your customers, as they can confidently open up that more special bottle and enjoy over several days.

Use Vineyard Fresh to preserve open wine and protect a wine's aroma, flavor character and quality with two simple sprays.

Vineyard Fresh is a mixture of Argon with a small percentage of Nitrogen (unlike Private Preserve, which also adds carbon dioxide) and works on a combination of chemistry and physics:

Chemistry – Argon is an inert gas and does not interact with wine. Argon is non-metallic, colorless, odorless, tasteless and exists naturally in the air we breathe. Argon is heavier than oxygen and lighter than wine.

Physics – The heavier gas will displace the lighter gas. Argon displaces the oxygen and creates a vapor barrier between the wine and the oxygen, preventing oxidation from spoiling the wine.

Available in two packages...

Retail Case

12 pack of 7 Gram bottles (120 uses/bottle)

\$90.00/cs - \$7.50/bttl

\$10.99 SSP

Restaurant Case

6 Pack of 16 Gram bottles (240 uses)
